R&M Concept 3

The wall system with a view

Realising Potential.

Frame with side section

Individuality

Walls with a view! If you want to look forward to a future with prospects, you need vision. Our walls meet this need in the most attractive way possible. R&M Concept 3: for rooms without limits, and people with vision.

Bayerische Landesbank administration building, Munich
Floor-to-ceiling glass walls with glass door elements. Extra-wide frames offer the option of integrating control units, switches and sockets. The frame panelling can be designed to meet specific requirements and preferences.

Adaptability

R&M Concept 3 wall systems with their sophisticated bearing structures can be adapted to any requested modular grid, and can be easily altered. The system offers a choice of any frame panel – from all-glass to opaque, through to special glass which can be darkened, either single or double-glazed. Individual physical requirements with regard to acoustics and fire safety can be met depending on the individual component variant.

Technical sophistication

We provide custom, detailed solutions, which are always based on the requirement profile and relevant architectural specifications.

Design flexibility

Custom development enables rooms to be designed to any specification, and adapted according to current company processes.

All-glass elements subdivide and structure rooms in many different ways, allowing you to make best use of the space in your property. Designed in harmony with the adjoining components, our solutions offer maximum transparency – with frameless all-glass walls, frame panels optimised to meet physical requirements, and high-quality structural glazing systems. Detached from the building's structural elements, all systems can also be implemented as room-in-room systems.
